

Data Science & Analytics

5-6 weeks · Band B · 125 hours · Live cohort of 20

The round that eliminates most technically strong candidates is the one where they present to somebody non-technical. Almost nobody rehearses it.

PILOT COHORT PRICE

~~₹9,999~~

₹6,999

SAVE ₹3,000

Pilot pricing, for the first 20 seats.

WITH PAT-VERIFIED

~~₹13,499~~

₹9,499

SAVE ₹4,000

Base plus the ₹2,500 credential add-on.

TO HOLD A SEAT

₹500

Refundable for 7 days, credited toward the base price on enrolment.

The hiring funnel this mirrors

Statistics and SQL screening, then a take-home case study over three to seven days, then a presentation to a panel that includes a non-technical stakeholder, then probing on method.

Recruiters consistently report the same rejection reason: the candidate could not communicate what the analysis does not support.

The four-project spine

Each project corresponds to one stage of that funnel. Finishing the stream is rehearsal for being hired.

01	Solo 1 THE SCREENING TASK	Answer three specified questions from a supplied dataset. Every claim carries an uncertainty statement.	16h
02	Solo 2 THE CASE STUDY	A business question with no stated analysis and a confounder in the data. "This data cannot answer that" is a passing answer, if defended.	28h
03	Pair THE TEAM ROUND	One student runs the analysis, the other independently tries to break it. They present a joint finding with the challenges included, not resolved away.	34h
04	Capstone THE FINAL LOOP	Student-proposed analysis delivered twice: a technical write-up and a ten-minute non-technical briefing. Both are assessed.	47h

Hours are indicative student effort and include the 15-hour DSA layer woven into the projects.

The DSA layer – applied, about 15 hours

Hashing and sorting where a project touches them, plus complexity analysis of the student's own pipeline or analysis code. No timed algorithmic rehearsals – this funnel screens on query and data reasoning, not on puzzles.

A problem is only set when a project touches the structure, never as homework divorced from context. How much this stream carries is decided by what its funnel actually asks for. That load sets the stream's depth, and the depth is what places it in Band B.

How the PAT is marked

Seven dimensions, 100 marks. Weighting is set per stream.

Problem framing	22
Design trade-offs	18
Implementation quality	10
Programming fundamentals	10
Failure analysis	18
Collaboration evidence	8
Defense under questioning	14
Total	100

60 is the pass mark, with no single dimension scoring zero. The same mark applies to every stream.

What the assessor will ask

The defense probes two things at once: the decisions you made, and the programming knowledge underneath them.

- What would change their conclusion
- What they chose not to measure
- How they would explain the uncertainty to someone who will act on it
- Query and method questions from their own analysis code

Questions come from your own project, so there is no question bank to practise against. Saying “I don't know” cleanly scores better than a confident wrong answer.

Before you start

Statistics. Python or R. SQL.

How the defense runs

Submit the repository and a short written rationale 48 hours ahead. Walk the assessor through the system, then answer questions. Assessors probe decisions and fundamentals, not syntax recall. Scores and written notes are returned afterwards, and a defense can be retaken once.

What you pay

Foundation ~~₹9,999~~ **₹6,999**

Live mentor-led teaching and the four projects.

PAT-Verified Credential ~~+₹3,500~~ **+₹2,500**

Live defense, mentor recommendation letter, verified portfolio published to a recruiter-visible profile, credential badge.

Career Hub **Free**

Recruiter visibility and job matching. The employer pays, never the student.

Bundled stack ~~₹13,499~~ **₹9,499**

Everything above, at pilot pricing.

Apply now – pay ₹500 to hold your seat
