

IoT & Embedded Systems

4-5 weeks · Band C · 95 hours · Live cohort of 20

Every interesting question in this field is about what happens when the device is somewhere nobody can reach it.

PILOT COHORT PRICE

~~₹6,999~~

₹4,999

SAVE ₹2,000

Pilot pricing, for the first 20 seats.

WITH PAT-VERIFIED

~~₹9,999~~

₹6,999

SAVE ₹3,000

Base plus the ₹2,000 credential add-on.

TO HOLD A SEAT

₹500

Refundable for 7 days, credited toward the base price on enrolment.

The hiring funnel this mirrors

Fundamentals screening, then a constrained build, then a hardware and constraints discussion, then a reliability conversation.

The most equipment-dependent stream, which is why it opens last.

The four-project spine

Each project corresponds to one stage of that funnel. Finishing the stream is rehearsal for being hired.

01	Solo 1 THE SCREENING TASK	Read a specified sensor and publish readings to a given endpoint at a defined interval.	14h
02	Solo 2 THE CONSTRAINED BUILD	The device must survive intermittent power and network loss without losing readings. Storage and retry strategy are the student's.	22h
03	Pair THE TEAM ROUND	One student owns firmware, the other the gateway and ingestion, meeting at a protocol they define together.	26h
04	Capstone THE FINAL LOOP	Student-proposed device and service, demonstrated live on hardware during the defense.	33h

Hours are indicative student effort and include the 6-hour DSA layer woven into the projects.

Duration may extend to 5-6 weeks for hardware logistics. Kit list and cost are confirmed at enrolment.

Opens eighth in the launch sequence

skillcred.in

The DSA layer – minimal, about 6 hours

Only the structures the projects themselves require, taught in place. No separate algorithmic assignments — this funnel is practical and scenario-based throughout.

A problem is only set when a project touches the structure, never as homework divorced from context. How much this stream carries is decided by what its funnel actually asks for. That load sets the stream's depth, and the depth is what places it in Band C.

How the PAT is marked

Seven dimensions, 100 marks. Weighting is set per stream.

Problem framing	14
Design trade-offs	18
Implementation quality	18
Programming fundamentals	14
Failure analysis	20
Collaboration evidence	8
Defense under questioning	8
Total	100

60 is the pass mark, with no single dimension scoring zero. The same mark applies to every stream.

What the assessor will ask

The defense probes two things at once: the decisions you made, and the programming knowledge underneath them.

- Power budget
- Behaviour when the network is gone for a day
- What fails first in the field, and how they would know
- Memory and timing questions from their own firmware

Questions come from your own project, so there is no question bank to practise against. Saying “I don't know” cleanly scores better than a confident wrong answer.

Before you start

C or C++ basics. Basic electronics. Hardware kit required.

How the defense runs

Submit the repository and a short written rationale 48 hours ahead. Walk the assessor through the system, then answer questions. Assessors probe decisions and fundamentals, not syntax recall. Scores and written notes are returned afterwards, and a defense can be retaken once.

What you pay

Foundation ~~₹6,999~~ ₹4,999

Live mentor-led teaching and the four projects.

PAT-Verified Credential ~~+₹3,000~~ +₹2,000

Live defense, mentor recommendation letter, verified portfolio published to a recruiter-visible profile, credential badge.

Career Hub **Free**

Recruiter visibility and job matching. The employer pays, never the student.

Bundled stack ~~₹9,999~~ ₹6,999

Everything above, at pilot pricing.

Apply now – pay ₹500 to hold your seat

20 SEATS · COHORT STARTS SOON · PILOT PRICING ENDS SOON

Deposit refundable within 7 days and credited toward the base price on enrolment.
